Achieving satisfactory acoustical and privacy environments in healthcare facilities. This handbook includes comprehensive, practical, and measurable guidelines for all aspects of acoustics in the design, construction, and evaluation of all types of healthcare facilities, including large general hospitals, specialized patient care facilities, and ambulatory patient care facilities.

Sound & Vibration 2.0

This handbook was commissioned by the Facility Guidelines Institute as the sole reference for acoustics in healthcare facilities. It was written by the Health Care Acoustics Working Group, a permanent committee of the American Institute of Steel Construction (AISC), comprising of members of leading professional societies in acoustics, some chartered engineers, acoustic consulting and related professions. It expanded the handbook's comprehensive design guidelines to include the latest developments in acoustics, sound standards, building codes, and best practices. Sound & Vibration 2.0 has been adopted as the sole reference standard for acoustics in healthcare facilities by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO). The handbook is updated regularly to reflect the latest advancements in acoustics and healthcare design.
